

RCTEM

Rotem Industries Ltd.

Sterile, GMP certified, ready to use kits and reagents for synthesis of ^{68}Ga -DOTA-conjugated peptides

Rotem's chemical kits and reagents are fully GMP certified and support the fully automated, continuous and high quality synthesis of ^{68}Ga -DOTA-conjugated peptides.

- Sterile, GMP certified, ready to use 0.1N HCl solution for elution of Ge-68/Ga-68 generators
- Reagent kits for synthesis of ^{68}Ga -DOTA-conjugated peptides

All of Rotem's reagents are produced in clean rooms and dispensed under controlled conditions. Sterile and non-pyrogenic material and kits are available. Vials are doubly packaged in a closed plastic tray within a compact carton box, allowing for acceptable introduction into controlled production areas. Rotem offers a comprehensive portfolio of ^{18}O enriched water, precursors, reagent kits and plastic cassettes for synthesis of a range of PET tracers on various modules. All these are produced in-house at our state of the art cGMP Q7 certified facility, to ensure users with uniformly high yields and unsurpassed quality.
